[www.agencymanagement.com.au](http://www.agencymanagement.com.au)[www.punterbox.com.au](http://www.punterbox.com.au)[www.nationaluglymugs.com.au](http://www.nationaluglymugs.com.au)[www.peamsaustralia.com.au](http://www.peamsaustralia.com.au)

Please drop by and have a look at our affiliated websites from time to time. NUM, Punterbox and Agency Management are officially launched and PEAMS Australia is next. Please report any errors and suggested improvements.

## An overview on what is happening

**S**ince our last Newsletter there has been a tremendous amount of work done both on the Website (see below for more detailed report) and corporately.

This Newsletter, for the first time, will go into more detail about the various parts, or Consoles as we call them, of the Website. Hopefully, by the end of this read, you will have a picture in

your mind about the status of the Website.

At the corporate level, we have a new shareholder, interested parties looking at the Operator role, Support Agents knocking at the door, and most encouragingly, Massage Centre owners letting us know that they are wanting to use the Website.

We continue to look for new investment, although the need has substantially fallen away, but as

indicated in the past, it is more about ensuring we have a comfort zone with our working capital.

## Developers & Website - update

**S**ince engaging Delimp Technologies, we have increased the number of code writers from 3 to 4 and now to 6. We now have 3 full time Designers and 3 full time Developers. Apart from the Delimp team, Power Creations continues to provide support and more recently, our digital services provider has become more engaged as the Website is at the stage where there is a lot of iconography required.

We are also back in contact with Bang Digital to re-engage with a view to implementing the SEO component to the Website. Further, we are about to commence discussions with our social media provider to design the social media components to the Website and our launch (he is very excited about that).

## Public Website

The front end of the Website, the Public aspect to the Website, is now, from a design perspective 100% complete. There may be the odd subtle change, content, that will pop up from time to time but they will be very small issues that can be resolved very quickly. That is no different to any Website owner maintaining a constant overview of their Website.

On the development front of the Public side of the Website, every feature is fully functional

except for:

- The Pin Up feature. This feature is about 80% complete, but will fall into place once the back end (Operations Console - Admin, and Escort Console - Register for Pin Up) is completed. The completion of the backend aspects to this feature will link the Pin Up feature and operate.
- Massage Centre Listings. This feature is about 60% complete but will fall into place quickly once the backend end of the Operations Console (Admin) is completed for Escorts Profile management. These 2 Consoles have a lot of common aspects to functionality and once the Escort Console and Operations Console (Admin) are complete, then a lot of copying over will take place.

## Escort Console

The Escort Console is the most progressed in the build of all the Consoles. It is also, apart from the Operations Console(s), the biggest.

The main features to the Escort Console are:

- Profile creation and management, including Media.
- Tour creation and management
- Listings (publishing a Profile)

A screen shot of the Escort Console, displaying the Dashboard, and a second screen shot displaying an example of one the features, Listed Profiles, also appears at the end of this newsletter

(the BRB and Suspend features are world first features. The Suspend feature in particular when activated calculates a credit for the suspended period and credits that value back to the Escorts *Credit Account* for future payments towards Listings).

All of the features which appear in the top portion of the side bar menu are fully functional, except for Media. Media composes Photos and Video. Photos is complete save for the Photo Verification process (a complex process that still requires substantial work). Video design is complete, only the development aspects to video remains (functionality - connecting to database, Profile creator and to Profiles).

Of the features that appear in the bottom portion of the side bar menu, all are functioning save for parts of Bookkeeping and all of Ugly Mugs (renamed NUM). The design aspects to the features are complete, just some of the development elements are to be completed, but are substantially advanced. A screen shot of the Add Credit feature, for example, also appears at the end of this newsletter.

There are some submenu items, like Travel and accommodation under Concierge Services, that will be included in v2.0.

Substantial beta testing is taking place with the Escort Console both by the MD and those Escorts who have come forward to assist with beta testing.

### Massage Centre Console

The Massage Centre Console is progressing but on a deliberately delayed basis. There are significant elements and functionality that are similar to the Escorts Console, and whilst the Escorts Console and significantly advanced and operational, there are still bugs and minor functionality changes being fixed and undertaken.

Until all of the bugs and final design and functionality is complete in the Escort Console, the common elements are not being built in the Massage Console.

In all other respects, like for example Community, Support Tickets and Concierge, those features are complete and fully functional.

### Agent Console

Like the Massage Centre Console, there are significant features within the Escort and Massage Centre Consoles that are similar to what will be contained in the Agent Console, like for example, Profile and Media management.

Once the Massage Centre Console is completed, then the Agent Console will fall into place quite quickly. All of the Operations Console (Admin) side for functionality has been established, and ready to connect to the Agent Console.

Like the other Consoles, Community and Support Tickets is fully functional, and Communication is partially completed.

### Viewer Console

The Viewer Console, the smallest of all the Consoles in terms of features, is nearing completion. The Punterbox and related features will be completed for version 2.0 unless time works in our favour.

The only feature remaining for completion is the Legbox feature which links to the Escort and Massage Centre Consoles, and to a lesser extent, the Operations Console (Admin). Overall, this feature from a design perspective is about 80% completed within the Viewer Console. The development components are well advanced and link into the Escort and Massage Centre Consoles as the corresponding elements complete.

The Dashboard feature is operational, but requires some backend linking to the database for the features available from the Dashboard to become operational.

### Operations Console (Admin)

Presently, the (Admin) and (Management) Consoles are combined into one. Work is now on foot for these Consoles to be separated. This entails establishing the security protocols for staff, and to a lesser extent third parties who will access to parts of the Website (like the Operator), which determines, when a staff member logs on, as to whether the (Admin) or (Management) Console loads.

Only the directors of the Company will have access to the (Management) Console (see commentary below).

Significant design work has been completed in this Console, around 80%. The development work is well advanced with a significant number of features, such as monitoring, reports, support and notifications are either completed and fully functional or near completion. A screen shot of a fully functioning monitoring report appears at the end of the newsletter (Escort Listings).

This Console is the largest of all the Consoles and manages all of the functionality of the Website. Everything from monitoring who is on line and where in the Website they are through to approvals for Media, and revenue reporting.

The Console incorporates a significant number of reporting pages, as well as marketing management, notifications, support tickets, blog production and email communications with Users.

Most of which is mentioned above has been completed from a design perspective, about 60%, with development (embedding the code to make the feature operate) around 40%.

The information pages, such as Community, Post Office and Support Tickets are fully functional, including, where there is a link with a user Console (Support Tickets).

A lot of the development will fall into place quickly, as the User Consoles are completed.

Operations Console (Management)

The main purpose of the (Management) Console is to control variables within the Website, such as Fees and any functionality that requires, from a policy position, Management approval, such as Agent registrations and set up within the Website, authorisation for Commission to the Operator and Agents, and security levels and access to certain pages depending on the security level.

Other areas include CMS and marketing production, incorporating templates for marketing for Agents, and the Post Office feature. A screen shot of the Post Office feature appears at the end of the newsletter.

Apart from these operational elements, the (Management) Console also provides a significant range of reports which cover off statistics, such as Agent performance, Listings, Memberships, Profiles, Tours, NUM, Punterbox and logs. Financial reporting is also set out in the (Management) Console and covers off areas such as, credits, revenue and commissions earned (from Concierge Services).

All of these reports are grounded in YoY growth, by comparison to the same time last year, by comparison to the total to the previous year, and by comparison to the historical record in terms of the actual growth organically. All reports incorporate subgroups by Location, Membership Type and Gender, as the case may be.

Operator Console

The Operator Console has not been commenced and will form a part of v2.0. Significant parts of this Console are also a part of the Agent Console, Operations Console (Admin) and Operations Console (Management). Once all of those Consoles are completed, the required elements to those Consoles will be copied over and amended to fit the requirements of the Operator.

Meanwhile, the requirements of the Operator are performed manually, all of which have been put into place.

PEAMS Console

This Console is a complex one as it links, via an API, into *Migration Manager*, the immigration law software deployed by PEAMS Australia Pty Ltd, the subsidiary, for the provision of visa services.

The build will commence under v2.0 of the Website.

Summary

The design component to the build is very well advanced and the development component is well advanced within certain Consoles, like for example, the Escort Console. As more development is completed, other components will come on stream quickly due to the similarity across many elements of each of the Consoles.

The external components to the Website are now coming into play, like Social Media, database compilation and SEO. There are still some legals to complete, mainly with the Support Agents and sections of the Terms & Conditions (as set out in the footer of the Website). And finally, the corporate pursuit of an Operator and the appointment of Support Agents is being stepped up.

### **Escort database - update**

**T**he Escort and Massage Centre database that has been reported on previously is progressing well. Our director, Andrew Stephen, is working hard to get the database rebuilt and importantly, accurate. Andrew is putting in upwards of 2 days a week and sometimes more (all dependant on availability). As previously mentioned, his contribution is greatly assisting and importantly is freeing up the MD's time so that the Website build, and related matters, can be focused on.

### **Capital Raising - update**

**A**s previously reported, the Company has secured a new shareholder for a portion of the Target Sum. The Company is still talking with interested parties about taking up a shareholding.

### **Support Agents - update**

**T**he appointment of Support Agents is progressing well with 5 Support Agents ready to commit and a further 3 currently in discussions.

There are 2 interested parties that have expressed interested in the role, but are presently overseas. We will be meeting with them in the next 2 weeks.

### **Operator - update**

**D**iscussions are continuing with 2 parties who have expressed interest in this role. One is based in NSW and the other in WA. Both have relevant experience to be appointed as the Operator. One in particular is very well suited to the role.

## Consoles

The following are screen shots of some of the Consoles. Please note the (blue) border has been added to give context.

## Operations Console (Admin)

The screenshot shows the 'Escort Listings' page within the E4U Operations Console Admin. The left sidebar contains a navigation menu with various links such as Dashboard, Global Monitoring (with a red 'Escort Listings' badge), Logged in Users, Massage Centre Listings, Visitors, Blog, Database, Notifications, Post Office, Publications, Support, Support Tickets, Accounting Reports, Analytics, and Billing (Support Services). The main content area has a search bar at the top. Below it is a table titled 'Escort Listings' with columns: Member ID, Member, Listing, Profile Name, Type, Listed, De-list, Days, Remaining, and Action. The table lists 67 entries. At the bottom of the page, there is a footer with server time (12:18:33 PM), refresh time (3), up time (0 days & 15 hours 2 minutes), and a navigation bar with links for Previous, 1, 2, 3, 4, 5, 6, 7, and Next.

E30121	Jo-anne	Melbourne	Melbourne02	Silver	03-05-2025	23-01-2026	266	210	...

**Note:** The side bar menu is in development view.

## Operations Console (Management)

The screenshot shows the 'New Communication' page within the E4U Operations Console Management. The left sidebar contains a navigation menu with links such as Dashboard, Global Monitoring, Blog, Database, Notifications, Post Office (with a red 'New' badge), Publications, Support, Support Tickets, Accounting Reports, Analytics, and Billing (Support Services). The main content area has a search bar at the top. Below it is a section titled 'Email Content' with fields for 'Use Template' (dropdown menu) and 'Preview' button. There is also an 'Additional Text' input field. A section titled 'Filter Member Types' includes dropdowns for 'Member Type' (radio buttons for All, Female, Male, Trans, Center, Viewer, Agent) and 'Location' (dropdown menu). A section titled 'Filter Users' includes dropdowns for 'User Status' (radio buttons for Enabled, Suspended, Inactive, All), 'User Emails' (radio buttons for All, Australian, Generic, E4U), and 'Select User' (dropdown menu). An 'Options' section includes a 'Copy To' input field containing email addresses (wayne@blackboxtech.com.au, xyz@blackboxtech.com.au, abs@blackboxtech.com.au) and a 'Trial Run Only' checkbox (radio buttons for On and Off). At the bottom right are 'Show Recipients' and 'Email Recipients' buttons.
